

HOW TO DISABLE THE REMI WINDOW SHADE ARM ALARM

This information was provided to a TOWB group member – disable the alarm at your own risk:

There are group of relays to the rear of your passenger door that control the alarm, you could either go in and remove the two that active it, otherwise to the left of the steering column there is a storage pocket with the chime inside, you can get behind the chime and unhook the 2 wires from the back and it will deactivate it. Removing the wires from the back of the chime itself is most likely the easiest and best way to go about this. I have attached some pictures showing the locations of the relays and which ones to pull if you decide to go that route, as well as an image of the chime itself and its location, you would just need to remove the wires from the back of it.
