

HOW TO REMOVE A TRAVATO DRAWER

Empty the drawer (not required, but it makes removal and replacement easier).

Pull the drawer out part way.

Locate the black pointed tabs in the drawer glides on each side.

Push one tab up and the other tab down and pull the drawer forward.

This should release the drawer from the glides.

(If it doesn't work reverse which ones you are pushing down or up.)

To replace the drawer line up the glides and carefully push the drawer all the way in.

The tabs will lock in place on their own.
